Patent No. 5646040
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: KleyT, Patrick W.
APPLICANT: MOOTE, KATEN J.
TITLE OF INVENTION: COMPOSITIONS FOR THE TREATMENT AND
TITLE OF INVENTION: DIAGNOSIS OF BODY WEIGHT DISORDERS, INCLUDING OBESITY
NUMBER OF SEQUENCES: 59
CORRESPONDENCE ADDRESS:
ADDRESSE: Pennie & Edmonds
STREET: 1155 Avenue of the Americas

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 7, Application US/08936706A
Sequence 7. Application US/08936706A
Patent No. 5876919
GENERAL INFORMATION:
APPLICANT: Kleyn, Patrick W.
APPLICANT: Moore, Karen J.
TITLE OF INVENTION: COMPOSITIONS FOR THE TREATMENT AND
TITLE OF INVENTION: DAGNOSIS OF BODY WEIGHT DISORDERS, INCLUDING OBESITY
NUMBER OF SEQUENCES: 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 7, Application US/09406071
Sequence 7. Application US/09406071
Patent No. 6207386
CENERAL INFORMATION:
CENERAL INFORMATION:
APPLICANT: Kleyn, Patrick W.
APPLICANT: Moore, Karen J.
TITLE OF INVENTION: COMPOSITIONS FOR THE TREATMENT AND
TITLE OF INVENTION: DIAGNOSIS OF BODY WEIGHT DISORDERS, INCLUDING OBESITY
NUMBER OF SEQUENCES: 60
CORRESPONDENCE ADDRESS:
ADDRESSE: Pennie & Edmonds Lip
STREET: 1155 Avenue of the Americas

                             The invention relates to Arabidopsis TUBBY-like proteins (TLP) and their corresponding nucleic acid sequences. The invention also relates to a transformed cell or a transgenic plant containing TLP nucleic acid and a transformed cell or a transgenic plant lacking TLP nucleic acid and a transformed cells or a transgenic plant lacking TLP nucleic acid. The TLP polypeptides and nucleic acids are useful for producing transgenic or transformed cells or plants having higher tolerance to salt, chilling, pathogens, oxidative stress or water-deficit. The present sequence is the Arabidopsis thaliana TLP9 encoding cDNA. The Arabidopsis thaliana TLP9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         840

1080 1080 1140 1020 This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are up-or down-regulated in transgenic plants overexpressing the heterodimeric E2Fs/DPa transcription factor of Arabidopsis and using these sequences to alter plant characteristics accordingly. The present invention describes generating transgenic plants for the production of growth regulators, enzymes, therapeutics, pharmaceuticals and animal feed products, where the altered plant characteristics are selected from increased yield or biomass, enhanced survival capacity, stress tolerance, plant architecture or physiology, altered endoreduplication, blochemistry, signal transduction, storage lipid mobilisation and/or altered photosynthesis, each relative to the corresponding wild type plants. Accordingly, these Altering plant characteristics, useful for producing plants for enzyme or pharmaceutical production comprises modifying in a plant, expression of one or more nucleic acids and/or modifying level or activity of one or 960 900 960 781 TCATCACCAGTCTTTAGGTCTCACTCAAAACCATTGCGCAGTAATAGTGCATCATGTAGC 840 GACTCAGGCAACAACATGGGAGATCCACCATTGGTGCTGAGCAACAAAGCTCCACGGTGG CATGAGCAGTTACGTTGCTGGTGCTTAAATTTCCATGGTCGAGTCACAGTGGCTTCGGTT GTGGCAGTTAGTGACTGTGAAGCAGGCCAGACATCTGAGAGGATC ATACTCCAGTTTGGGAAAGTTGGGAAGGACATGTTTACCATGGATTATGGATATCCGATT TCTGCGTTTCAAGCGTTTGCTATCTGCCTGAGCAGTTTTGAAACCAGAATTGCCTGTGAA ATACTCCAGTTTGGGAAAGTTGGGAAGGACATGTTTACCATGGATTATGGATATCCGATT GACTCAGGCAACAACCTGGGAGATCCACCATTGGTGCTGAGCAACAAAGCTCCACGGTGG CATGAGCAGTTACGTTGCTGCTTAAATTTCCATGGTCGAGTCACAGTGGCTTCGGTT plants SegID 943. metabolism growth regulator; animal feed product; thale cress; cell wall biosynthesis; nitrogen metabolism; carbon Thale cress cDNA upregulated in E2Fa/Dpa expressing transgenic; E2Fa/DPa transcription Claim 1; SEQ ID NO 943; 134pp; English ĸ BP. sequences can also be useful as positive or negative selectable markers during transformation of cells or tissues. The identified genes play a role in a variety of biological processes such as DNA replication, cell wall biosynthesis, nitrogen and/ or carbon metabolism or they function as transcription factors. This polymuclaotide sequence is thale cress cDNA upregulated 1.3 fold or more in plants overexpressing the EZFs/DPa transcription factor, given in an exemplification of the invention.

The sequences can be used to produce transgenic plants, which overexpress (II), where the transgenic plant has an altered trait as compared to a non-transgenic plant or wild-type plant. The transgenic plant comprises an altered trait selected from increased tolerance to abiotic stress, increased tolerance to cold, increased tolerance to cold, increased germination in cold, increased tolerance to cold, increased tolerance to low nitrogen conditions, increased tolerance to low nitrogen conditions, increased tolerance to low phosphate conditions, increased tolerance to low nitrogen conditions, increased tolerance to low piccessed tolerance to multiple fungal disease and particularly Erysphe, Pusarium and Botrytis, dincreased tolerance to multiple fungal pathogens, increased tesistance to glyphosate, increased sensitivity to ABA,

increased sensitivity to ACC, altered sugar sensing, increased tolerance
to sugars, altered carbon/nitrogen sensing, early flowering, late
flowering, altered flower structure, loss of flower determinacy, reduced
fertility, altered shoot meristem development, altered branching pattern,
altered stem morphology, altered vascular tissue structure, reduced
aptical dominance, altered trichome density, altered trichome development,
altered trichome structure, altered trichome development,
altered trichome structure, altered seed ripening, altered seed
avoidance, altered seed development, altered phase change,
caltered cell proliferation, altered coll differentiation,
cc altered senescence, abnormal embryo development, altered phase change,
altered senescence, abnormal embryo development, altered phase change,
caltered senescence, abnormal embryo development, altered phase change,
caltered senescence, abnormal embryo development, altered plasse change,
collant size, increased biomass, large seedlings, dwarfed plants, dark
cgreen leaves, change in leaf shape, increased leaf size and mass, light
cgreen leaves, change in leaf shape, increased leaf size and mass, light
cgreen leaves, change in leaf shape, altered abed seed shape, large
seed, increased leaf wax, increased leaf fatty acids, altered seed oil
content, altered seed protein content, altered seed shape, large
content, altered seed protein content, altered seedsprenyl content,
altered leaf prenyl lipid content, increased anthocyanin levels, and
content part of the printed specification, but was obtained in
core form part of the printed specification, but was obtained in
celetronic format directly from WIPO at
cft._sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              665

                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                               셤
                                                                               The invention relates to Arabidopsis TUBBY-like proteins (TLP) and their corresponding nucleic acid sequences. The invention also relates to a transfermed cell or a transgenic plant containing TLP nucleic acid and a transformed cell or a transgenic plant lacking TLP nucleic acid and a polypeptides and nucleic acids are useful for producing transgenic or transformed cells or plants having higher tolerance to salt, chilling, pathogens, oxidative stress or water-deflicit. The present sequence is the Arabidopsis thaliana TLP11 encoding cDNA. The Arabidopsis thaliana TLP11 encoding cDNA. The Arabidopsis thaliana TLP11 sequence is the gene is located at chromosome III.

The invention describes an Arabidopsis thaliana mucleic acid (I). The polypeptide (II) encoded by (I), transgenic plant (III) or geneticallly composition (IV) are useful for screening a candidate agent for its biological effect, by combining the candidate agent with (II), (III) or (IV), and determining the effect of the candidate agent on (II), (III) or (IV), and determining the effect of the candidate agent on (II), (III) or (IV), and determining the effect of the candidate agent on (II), (III) or (IV). (I) is useful for identifying homologous or related genes, for producing compositions that modulate the expression or function of its encoded protein, for mapping functional regions of the protein, in changing that calls, in screening assays of various plant strains to determine the strains that are capable of various plant strains to determine the strains that are capable of various production of blosynthetic product in a plant, for producing polypeptides, as probes for the detection of mRNA in biological continuing oligomucleotides, as probes for the detection of mRNA in biological samples, to generate additional copies of (I), to generate ribozymes or oligomucleotides, as single stranded DNA probes or as triple-strand for introducing or improving disease resistance and stress collegant for introducing or improving disease resistance and stress to transgenic organisms, such as plant cells and plants. (II) or (III) is useful as crops for their enhanced diseased resistance, enhanced traites of interest, for screening programs, as crops which exhibit chalance to environmental stress, or to produce a factor. This sequence represents a nucleic acid that may correspond to naturally contained in electronic format directly from the US patent office at sequence. The sequence the print of the printed specification, but was obtained in electronic format directly from the Boguence of sequence.
                                                                                                           Novel Arabidopsis thaliana nucleic acid useful for identifying homologous or related genes, and to create genetically modified and transgenic organisms, such as plant cells and plants.
                                                                                                                                                                                                                               Claim 1; SEQ ID NO 879; 43pp; English

This invention relates to novel isolated plant nucleic acid molecules, or variants thereof, that encode transcription factors. Specifically, it refers to transcription factor proteins that are capable of binding to DNA in order to regulate gene transcription and gene expression in a plants, in particular Eucalyptus grandis and Pinus radiata. The present invention describes DNA constructs containing DNA encoding a constructs containing DNA encoding a transcription factor that regulates the promoter, which is operably transgenic plants expressing a transcription factor that confers a trait to the plant such as increased drough, salt or disease tolerance, height to the plant such as increased drough, salt or disease tolerance, height cutrifional characteristics, as well as improved taste, starch composition, flower longevity and germination, amongst others.

Accordingly, such plants that are successfully transfected with a DNA construct can be characterized by a difference in flower color, petal or leaf shape and size, aroms or plant height. This polymucleotide is a plant transcription factor cDNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 GCCGCCTCAACCGCTAATAGTTCAGACCCTTTCAGCTCGTCGCAGCTCCCCGGAGGAGCTG 120

The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at available in electronic form from the US patent office at the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme composing path tolerance to cold, heat, drought, herbicides, extreme plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for monipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, increased resistance to plant disease, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one or by providing improved plant growth and sevelopment under at least one stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert plant can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              95 GCTGGTCGGAGCTCCCGGAGGAGCTGCTTAGAGAAATCCTGATTAGGGTTGAGACTGTTG 154

This invention relates to novel isolated plant mucleic acid molecules, or variants thereof, that encode transcription factors. Specifically, it refers to transcription factor proteins that are capable of binding to DNA in order to regulate gene transcription and gene expression in a plants, in particular Eucalyptus grandis and Pinus radiata. The present cranscription factor that regulates the promoter, which is operably invention describes DNA constructs containing DNA encoding a cranscription factor that regulates the promoter, which is operably linked to the desired mucleic acid to be expressed. It further provides transgenic plants expressing a transcription factor that confers a trait of the plant such as increased drought, salt or disease tolerance, height change, enhanced cold/ frost tolerance, enhanced color, health and cutritional characteristics, as well as improved taste, starch composition, flower longevity and germination, amongst others.

CC Accordingly, such plants that are successfully transfetced with a DNA construct can be characterized by a difference in flower color, petal or leaf shape and size, arome or plant height. This polynucleotide is a plant transcription factor cDNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  148
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           420

```
New isolated Arabidopsis TUBBY-like proteins, useful for producing transgenic or transformed cells or plants having higher tolerance tsalt, chilling, pathogens, oxidative stress, or water-deficit.
                     Transgenic plant; salt tolerance; crop improvement; cold toleranc oxidative stress; drought resistance; TUBBY-like protein; plant; chromosome 2; gene; ss.
Arabidopsis thaliana TUBBY-like protein (TLP) 3 encoding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     272 TCCCTATCTCCCTCAAGCAGTCTGGTCCAAGAGATTCTCTAGTTCAATGCTTTATAAAAC 331
                                                     The invention relates to Arabidopsis TUBBY-like proteins (TLP) and their corresponding nucleic acid sequences. The invention also relates to a transformed cell or a transgenic plant containing TLP nucleic acid and a transformed cell or a transgenic plant lacking TLP nucleic acid. The polypeptides and nucleic acids are useful for producing transgenic or transformed cells or plants having higher tolerance to salt, chilling, pathogens, oxidative stress or water-deficit. The present sequence is the Arabidopsis thaliana TLP3 encoding cDNA. The Arabidopsis thaliana TLP3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GATCCAGGTCTCAACGTGTTCTAGGATACTTCTGTTCCTGTTGATGCTTTCAAGCAGA

This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are up convencentiated in transgenic plants overexpressing the heterodimeric STR-JDPa transcription factor of Arabidopsis and using these sequences to alter plant characteristics accordingly. The present invention describes generating transgenic plants for the production of growth regulators, carying plants for the production of growth regulators, carymes, therapeutics, pharmaceuticals and animal feed products, where the altered plant characteristics are selected from increased yield or biomass, enhanced survival capacity, stress tolerance, plant architecture or physiology, altered endoreduplication, biochemistry, signal rachitecture or physiology, attered endoreduplication, biochemistry, signal architecture or physiology, attered endoreduplication, biochemistry, signal architecture can also be useful as positive or negative selectable markers during transformation of cells or tissues. The identified genes play a cole in a variety of biological processes such as DNA replication, cell wall biosynthesis, introgen and/or carbon meterabolism or they function as transcription factors. This polymuclectide sequence is thale creas CDNA uranscription factor, given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              271
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         388
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         445

The invention relates to a novel DNA sequence encoding a transcription factor derived from a plant. The invention further comprises antisense RNA sequences, ribozyme activity RNA, RNA sequences, a vector.

C transformed plant cells, antibodies and proteins, all related to the carried from a rice-genome database. The invention further provides a method for determining the transcription regulatory regions of the rice genome. The novel DNA is useful for controlling the expression of a gene in a plant and for producing a modified plant with desired and different characteristics. The plant DNA and method enables the acquisition of many cranscriptional-regulatory regions. This polymucleotide represents a DNA sequence taken from a rice genome clone library for use in the invention. Note: This sequence is not shown in the specification. It has been retrieved from a sequence listing in electronic format from the Japanese Patent Office. The invention claims DNA sequences of SEQ ID Nos 1 to 28469 and encoded protein sequences of SEQ ID Nos 28470 to 56791.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       332
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     272

The present invention describes an Arabidophia functional functions of the greater and the sequence capable of phybridising under stringent conditions to a sequence (S1) selected from any one of the 999 sequences given in ABL93236 to ABL94234. (I) have insecticide and functions and the sequences given in they can be used as protein expression modulators. (I) can be used in identifying homologous or related genes, in producing compositions that identifying homologous or related genes, in producing compositions that compositions that it is marginate the expression or function of their encoded proteins, mapping functional regions of the proteins, and in studying associated physiological pathways. (I) can also be used: (I) for the genetic physiological pathways. (I) can also be used: (I) for the genetic of witherious plate strains to determine the strains that are best capable of various plant strains to determine the strains that are best capable of witheranding a particular disease or environmental stress; (3) for enhancing or inhibiting production of a biosynthetic product in a plant; (A) as probes in mapping and in diagnosis, in genetic modification and for screening purposes, to generate additional copies of the nucleic acids, to generate ribozymes or antisense oligonucleotides, and as single for generating genetically modified transgenic organisms. Note: The sequence data for this patent did not form part of the printed regenerate specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1054

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to novel isolated plant nucleic acid molecules, or variants thereof, that encode transcription factors. Specifically, it refers to transcription factor proteins that are capable of binding to DNA in order to regulate gene transcription and gene expression in a plants, in particular Eucalyptus grandis and Plnus radiata. The present invention describes DNA constructs containing DNA encoding a transcription factor that regulates the promoter, which is operably linked to the desired nucleic acid to be expressed. It further provides transgenic plants expressing a transcription factor that confers a trait co the plant such as increased drought, salt or disease tolerance, height change, enhanced cold, frost tolerance, enhanced color, health and nutritional characteristics, as well as improved taste, starch

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    composition, flower longevity and germination, amongst others. Accordingly, such plants that are successfully transfected with a DNA construct can be characterized by a difference in flower color, petal leaf shape and size, arom or plant height. This polymuclectide is a plant transcription factor cDNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Connett MB, Emerson SJ, Frost MJ;

This invention relates to novel isolated plant nucleic acid molecules, or variants thereof, that encode transcription factors. Specifically, it refers to transcription factor proteins that are capable of binding to DNA in order to regulate gene transcription and gene expression in a plants, in particular Bucalyptus grandis and Pinus radiata. The present invention describes DNA constructs containing DNA encoding a transcription factor that regulates the promoter, which is operably inked to the desired nucleic acid to be expressed. It further provides transcription factor that regulates the promoter, which is operably linked to the desired nucleic acid to be expressed. It further provides to the plant such as increased drought, salt or disease tolerance, height cother plants that are successfully transfected with a DNA composition, flower longevity and germination, amongst others.

Accordingly, such plants that are successfully transfected with a DNA construct can be characterized by a difference in flower color, petal or leaf shape and size, aroma or plant height. This polymucleotide is a plant transcription factor cDNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                     gene; ss; plant; transcription; gene regulation; gene expression; transgenic plant; drought resistance; disease resistance; salt tolerance; cold tolerance; freezing tolerance; flowering; flavor enhancer; flower color.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polynuclectides isolated from plants encoding transcription factors, and polypeptides encoded by such polynuclectides, useful for regulating gene transcription and gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Connett MB, Emerson SJ, Frost MJ;
